Occurrence Description:

Report of "APU FIRE" warning message on EICAS during descent
 The flight crew reported "APU FIRE" warning message on EICAS and APU high ITT indication when starting APU during descent. They then followed the QRH procedure shutting down the APU and shutting off the APU fuel. The "APU FIRE" warning indication was cleared and they diverted to another airport.

Maintenance personnel inspected the APU and found a crack in the combustion liner and signs of fire inside the APU cowling.
