SOUTH AFRICAN

CIVIL AVIATION
AUTHORITY

Risk-Based Oversight - How will it benefit the SACAA?

- Will allow for a more effective use of the available oversight resources.
- RBO provides more flexibility to authorities to better allocate their staff, e.g. more intensive oversight for organisations having a high-risk profile, or less performing, or sustaining major management changes.

Risk-Based Oversight - How will it benefit the SACAA? (cont.)

- However, RBO should not be seen as a means to reduce the staff resources; traditional oversight will remain.
- RBO, through increased efficiency, will increase the effectiveness of oversight and contribute to a reducing trend in the number of accidents.

SOUTH AFRICAN

CIVIL AVIATION
AUTHORITY

- The SACAA can provide Proportionate Surveillance, which is required, based on risk and performance.
- Can identify the key areas for concern, based on targeted consistent risk analysis.
- The SACAA is able to efficiently assign resource to issues requiring the most attention.
- The SACAA is flexible enough to respond to incidents and is able to predict where issues may arise.
